DETAILED ACTION

Status of the Application

1. Receipt is acknowledged of a response to a non-final office action, which was dated on February 15, 2005.

Status of the Claims

2. Claims 1-14 and 21-22 are pending (renumbered 1-16).

Reasons for Allowance

3. Applicants claim a method for screening a sample of complex biological mixture using two size exclusion medium (e.g., SEC columns) wherein the target/ligand complex that is selected in the first size-exclusion step is subsequently "dissociated" (e.g., varying pH, salt, etc.) before applying the second size-exclusion step. The prior art of record does not fairly teach or suggest such a method. The closest prior art (i.e., Jindal et al.) teaches the application of a first and a second size exclusion step without an intermediate "dissociation" step. The dissociation that occurs in the Jindal et al. reference takes place during the second size exclusion step, not prior to the application of the second SEC column.
